

SOHLH1: sequence-only motif prediction vs experiment

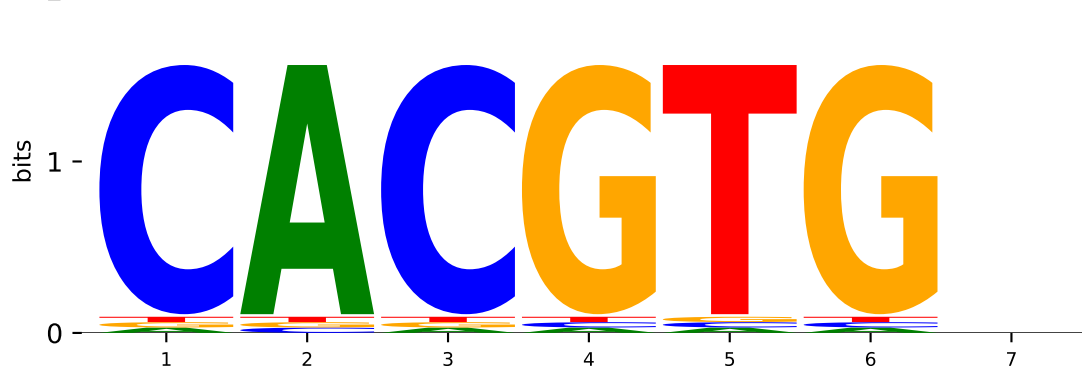

TFScope prediction — SOHLH1 (bHLH)

MoE-base, sequence only · crop 40-130 (DBD 53-111) · gate core, no IC-trim · CGCGGTG · GC 0.78 · mean IC 1.34

Experimental reference — CACGTG

Suzuki 2014, PLOS One e101681 · reporter + ChIP · SOHLH2/SOHLH1 heterodimer; no EMSA; CACGTG is palindromic · GC 0.65

Forward alignment, all 6 predicted columns on 6/6 reference columns (coverage 100%): $r = 0.36$. Grey = not scored.

Caveat: the best-scoring alignment over orientation×shift is rc with 4 columns, $r = 0.65$ (align_pwm default reports $r = 0.65$); r does not discriminate.
