

GCN4 homodimer: two protomers read the two halves of TGACTCA

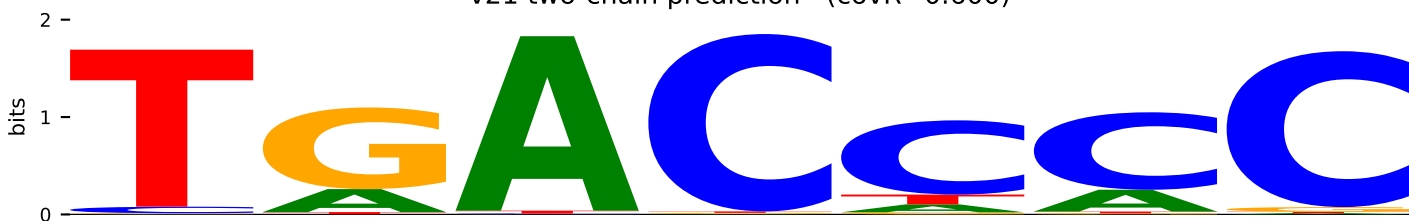

GCN4 ground truth (TGACTCA, bZIP homodimer)

v20 single-chain prediction (covR=0.998)

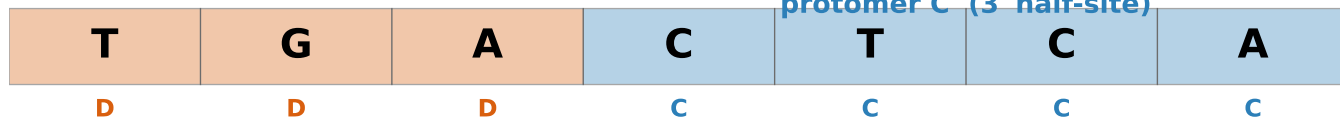

v21 two-chain prediction (covR=0.600)

protomer D (5' half-site)

protomer C (3' half-site)

1YSA: each base colored by the nearer GCN4 protomer (min heavy-atom distance)
