

ADNP: sequence-only motif prediction vs experiment

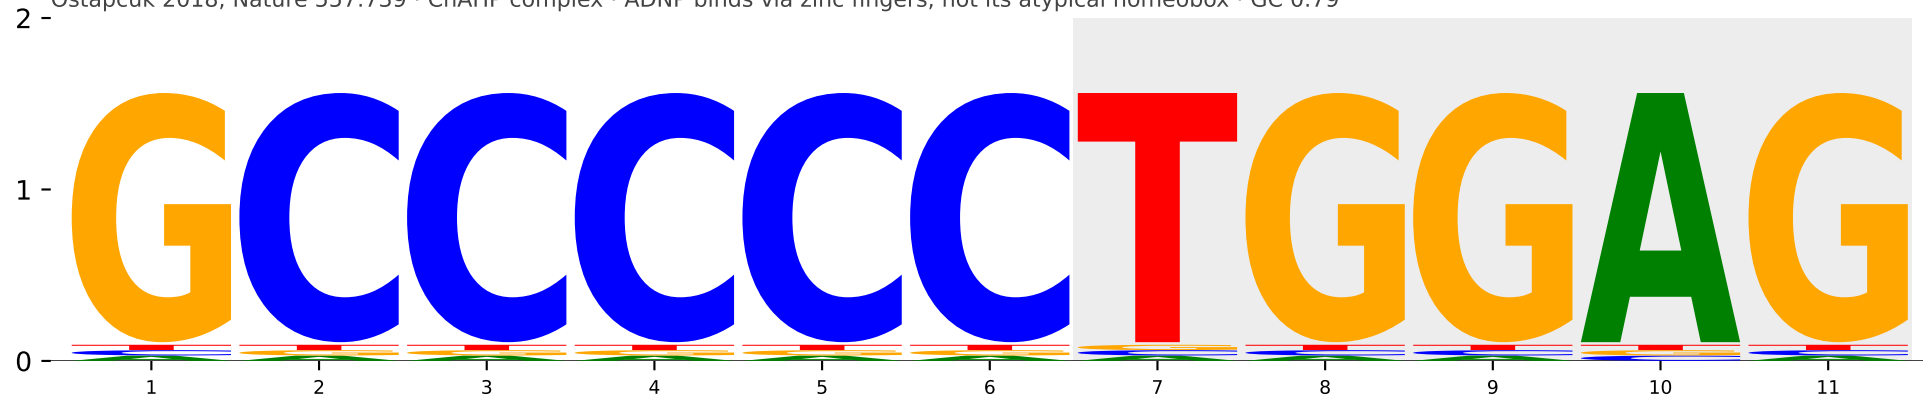

TFScope prediction — ADNP (C2H2 zinc fingers 5-9)

MoE-base, sequence only · crop 447-686 (ZF5-9 masked) · gate core, no IC-trim · ATCCCC · GC 0.52 · mean IC 0.57

Experimental reference — GCCCCTGGAG

Ostapczuk 2018, Nature 557:739 · ChAHP complex · ADNP binds via zinc fingers, not its atypical homeobox · GC 0.79

Forward alignment, all 6 predicted columns on 6/11 reference columns (coverage 55%): $r = 0.46$. Grey = not scored.

Caveat: the best-scoring alignment over orientation $\times$ shift is rc with 4 columns, $r = 0.56$ (align_pwm default reports $r = 0.52$); r does not discriminate.
